

ABSTRACT

1 For lost circulation treatment, a lost circulation
2 additive including a dry mixture of water soluble
3 crosslinkable polymer, a crosslinking agent, and a
4 reinforcing material of fibers and/or comminuted plant
5 materials. The method of forming a lost circulation
6 fluid includes contacting the additive with water or an
7 aqueous solution, with a method of conforming the
8 formation further including the step of injecting the
9 fluid into the wellbore.
